DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 57-72, drawn to a process of forming a magnetic tunnel junction with multiple magnetic layers, classified in class 29, subclass 603.14.
 - II. Claims 73-79, drawn to a process of forming a magnetic random access memory element, classified in class 29, subclass 604.
 - III. Claims 92-102, drawn to a process of forming a magnetic tunnel junction with a sensing structure, classified in class 29, subclass 603.09.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group II and Groups I, III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (Group II) as claimed does not require the particulars of each of the subcombinations (Groups I and III) as claimed because Group II does not require the particulars or specifics of forming a first nonmagnetic layer in direct contact with either a first magnetic layer or pinning structure and then removing a portion of the first nonmagnetic layer to form an opening. The subcombinations (Groups I and III) each have separate utility, or a separately usable process, such as forming multiple magnetic layers (e.g. first and second, in Group I), or forming a sensing structure (in Group III).

Application/Control Number: 10/759,078 Page 3

Art Unit: 3729

3. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Inventions of Group I and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, each of the subcombinations of Groups I and III have separate utility, or a separately usable manufacturing process.

Group I specifically requires a manufacturing process of forming a first magnetic layer and forming a second magnetic layer to achieve magnetic properties during operation of the magnetic tunnel junction, as this feature is not required in Group III.

Group III specifically requires forming a sensing structure with a free layer to achieve magnetic sensing, as this feature is not required in Group I.

See MPEP § 806.05(d).

- 5. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and

specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. Dexter Tugbang whose telephone number is 571-272-4570. The examiner can normally be reached on Monday - Friday 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
